KVX UTILITY TOOTH SYSTEM

KVX

The trouble-free and safe solution for Utility machines

KVX offers tooth systems for excavators of all sizes. For Utility machine buckets, we offer a G.E.T. system that makes your mini-excavator, backhoe, skidsteer or loader stand out from the competition.

The KVX teeth are bolted directly to the bucket lip. For mini-excavators this is especially good news, as you are able to mount or change the teeth using hand spanners only. What's more, KVX can also supply the bucket Lip itself, enhancing the strength and life of the bucket.

Simple, Reliable, No welding!

Size Doesn't Matter!:

Utility machines also need to work trouble-free day after day. A safe guarantee is to choose KVX for the entire Utility fleet.

Adapter repairs and tooth retention can constitute a significant ongoing expense, not to mention the damage caused to adapters when a tooth is lost. The KVX system completely eliminates these items! The specially hardened teeth have no problems digging in asphalt or working in the toughest of conditions.

The KVX planer plate can be fitted to excavators of all sizes.

System for Excavators: 0–2,4 tonne (M16)

The M-16 system can be installed on mini-machines from 0 to 2,4 tonnes. No matter what brand of excavator, the KVX system will fit!

M-16: 0–2,4 tonne (also available as cranked tooth for loaders)

System for Excavators: 2,5–9 tonne (M20 & M27)

Not Just for Excavators!: Backhoe loaders, Skidsteers and Wheel loaders can all benefit from the selection of KVX.

M-20:
2,5–5 tonne
M-27:
6–9 tonne
